What to know before ordering:

Where will it be used?

Indoor Use	Handouts, retail or food service, nametags
Outdoor Use	Car decals, machinery/equipment
Mixed Use	Laptop decals, signage, refrigerated food & beverages

What type of adhesive is needed?

Permanent	Creates a strong bond once applied and cannot be removed without damage to label or surface.
Removable	Label can be removed with little or no trouble but will become permanent over time.
Repositionable	Label can be removed and reapplied to another surface, may become permanent dependent on use conditions.
Static Cling	No adhesive is used which makes this label completely removable and for short-term use only.

Does the artwork bleed or have a screen?

What is a bleed?

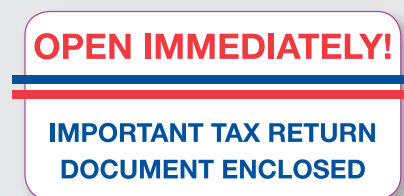

A bleed is when the ink color goes off the edge of the label.

Bleeds are charged for **each color** that goes off the edge, not for each side that the color goes off.

Bleeds are not available on Square Corner Butt Cut Labels.

1 Bleed Example

2 Bleeds Example

What is a screen?

A screen of an ink color is when a percentage of the solid color is being printed. Graduated screens go from a solid to 0%.

Note: 4-Color Process designs will not be charged for bleeds or screens.

1. Convert inch measurements to decimals. (See Conversion Chart.)

3. Find correct square inch size in left hand column. Then locate correct quantity column.

CUSTOM PRINTED SQUARE CORNER BUTT CUT LABELS ON ROLLS

Rectangles or squares with "no space" between labels.

Leave $\frac{1}{16}$ " inset area on all sides.

Bleeds are not available.

HOW TO PRICE SQUARE CORNER LABELS

Example: You want to order 2,000 one color labels that measure $2\frac{1}{8}$ " (in width) x $4\frac{1}{2}$ " (in length)...

1. Convert inch measurements to decimals. (See Conversion Chart.)
2. Multiply width x length (2.125×4.50) = 9.562 sq. in.
3. Find correct square inch size in left hand column.
Then locate correct quantity column.
4. Your price per thousand is where size & quantity columns intersect: \$134/M x 2 = \$268.

INDIVIDUALLY SHEETED SQUARE CORNER LABELS

Many square corner labels are available in individual sheet form. A Bend & Peel tab on one side or a Crack N' Peel backscore will assist in easy removal. Bleeds are only available on sheeted labels with a tab.

Types of Pressure Sensitive Label Adhesives

Permanent	Removable	Repositionable	Static Cling
Permanent adhesive creates a strong bond once applied to an appropriate surface, which can lead to damage of the label and the surface when attempting removal.	Removable adhesive can be removed from the surface it is applied to with little to no damage to the label or to the surface. However, dependent on the exact adhesive and/or the environment, removable adhesive can become permanent.	Repositionable adhesive is meant for short-term removability when a label needs to be repositioned or reapplied. However, dependent on the exact adhesive chosen, repositionable adhesive can become permanent.	Static Cling is meant for short-term, no adhesive applications. The environment in which it is used in needs to be heavily considered before selecting this non-adhesive choice.

Adhesive Quick Terms

Initial Tack: This is the immediate holding strength of the label adhesive once applied to the surface. If initial tack is low, it will have low adhesive, allowing the label to be removed cleanly. Adhesives with low initial tack will build up adhesion over time and become hard to remove or become permanent over time. Some permanent adhesives have low initial tack to allow for quick reapplication if crooked, however that isn't true for all permanent adhesives.

Minimum Application Temperature: This is the lowest temperature at which a pressure sensitive label can be applied to a surface and maintain its initial adhesion strength. A common minimum application temperature is 40-50 degrees Fahrenheit. If a label is applied below the minimum application temperature the label will stiffen and the adhesive will crystallize and become solid. There are adhesives specific for cold temperature applications.

Service Temperature Range: This is the temperature range at which a label will be exposed to while attached to the surface. Most pressure sensitive adhesives have a range of -65 to 200 degrees Fahrenheit. There are choices that go beyond this range. Keep in mind storage of the labels before they are applied.
